1. INTRODUCTION

1.1 ABSTRACT

In our society, we have people with disabilities. The technology is developing day by day but no significant developments are undertaken for the betterment of these people. Communications between deaf-mute and a normal person has always been a challenging task. It is very difficult for mute people to convey their message to normal people. Since normal people are not trained on hand sign language. In emergency times conveying their message is very difficult. The human hand has remained a popular choice to convey information in situations where other forms like speech cannot be used. Voice Conversion System with Hand Gesture Recognition and translation will be very useful to have a proper conversation between a normal person and an impaired person in any language.

The project aims to develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb. We are making use of a convolution neural network to create a model that is trained on different hand gestures. An app is built which uses this model. This app enables deaf and dumb people to convey their information using signs which get converted to human-understandable language and speech is given as output.

1.2 PROJECT OVERVIEW

Deaf and dumb people are humans at the deepest psychological level. Many of these people are not even exposed to sign languages and it is observed that it gives a great relief on a psychological level, when they find out about signing to connect themselves with others by expressing their love or emotions. About 5% population in world are suffering from hearing loss. Deaf and dumb people use sign language as their primary means to express their thoughts and ideas to the people around them with different hand and body gestures. There are only about 250 certified sign language interpreters in India for a deaf population of around 7 million. In this work, the design of prototype of an assistive device for Deaf-mute people is presented so as to reduce this communication gap with the normal people. This device is portable and can hang over the neck. This device allows the person to communicate with sign hand postures in order to recognize different gestures based signs. The controller of this assistive device is

developed for processing the images of gestures by employing various imageprocessing techniques and deep learning models to recognize the sign. This sign is converted into speech in real-time using text-to-speech module.

2. LITERATURE SURVEY

2.1 Existing problem :

The project aims to develop a system that converts the sign language into a human hearing voice in the desired language to convey a message to normal people, as well as convert speech into understandable sign language for the deaf and dumb. We are making use of a convolution neural network to create a model that is trained on different hand gestures. An app is built which uses this model. This app enables deaf and dumb people to convey their information using signs which get converted to human-understandable language and speech is given as output.

According to the World Health Organization, the world population experiencing hearing and speech challenges approximates over 466 million people globally [1,2]. With such disability, instead unequally distributed resources, these people are vulnerable to discrimination [3]. The fact that every human being, abled or disabled, is entitled to a good life with equal opportunities calls for affirmative action [4,10]. This society requires attention from all quarters, especially on technological enhancement, to ensure the disabled get a comfortable life [5,16,20]. With the number increasing significantly, something needs to be done. The deaf and dumb are introverts, remaining engraved in their thoughtful world. Communication, which is essential in human life, is challenging. Humans are social beings, and effective communication is necessary [6, 22,24]. The development of technology should, therefore, serve to improve their lives as well [7]. The introduction of an application that can be used by the deaf and dumb will be a great innovation. It will not only make life easier but will as well increase their life opportunities, including employability. The deaf and dumb category must be involved within technology on PC experience as they involved in technology on smartphones. D- talk application provides this experience for them by reading their hand movements and displays a certain function.

2.3 Problem Statement Definition :

The image recognition process is a process that enables the input of the sign language into the application for necessary processing [20,31,46]. The process requires a sign to be made in front of the webcam. The computer captures the sign made via the webcam and stores the different images made. Images that come from the camera will be resized, and the resolution will change. The colors will change to grayscale image and then to black and white images while editing the images [25, 33,47]. There several techniques used to extract the image, such as SIFT, SURF, BRISK, and HSV algorithms. Compared to standard algorithms, neural networks can solve somewhat complicated issues at a much easier level about the complexity of algorithms. Neural networks can solve somewhat complicated issues at a much easier level concerning the complexity of algorithms [26, 30]. The neural network builds to mimic human brain neural function but with the mathematical functions [31, 33,38]. The training phase was based on storing the images in the database. The database contained images of hands, both men and women. The training was based on identifying all possible signs that can be made using one hand. For this purpose, 30 different images with different levels of lights and duration were captured and stored in the database. These images were used as training images that will help in making the right decision for the tasks. The database contained over 1000 images of unique hands and signs.

3.IDEATION & PROPOSED SOLUTION

3.1Empathy Map Canvas

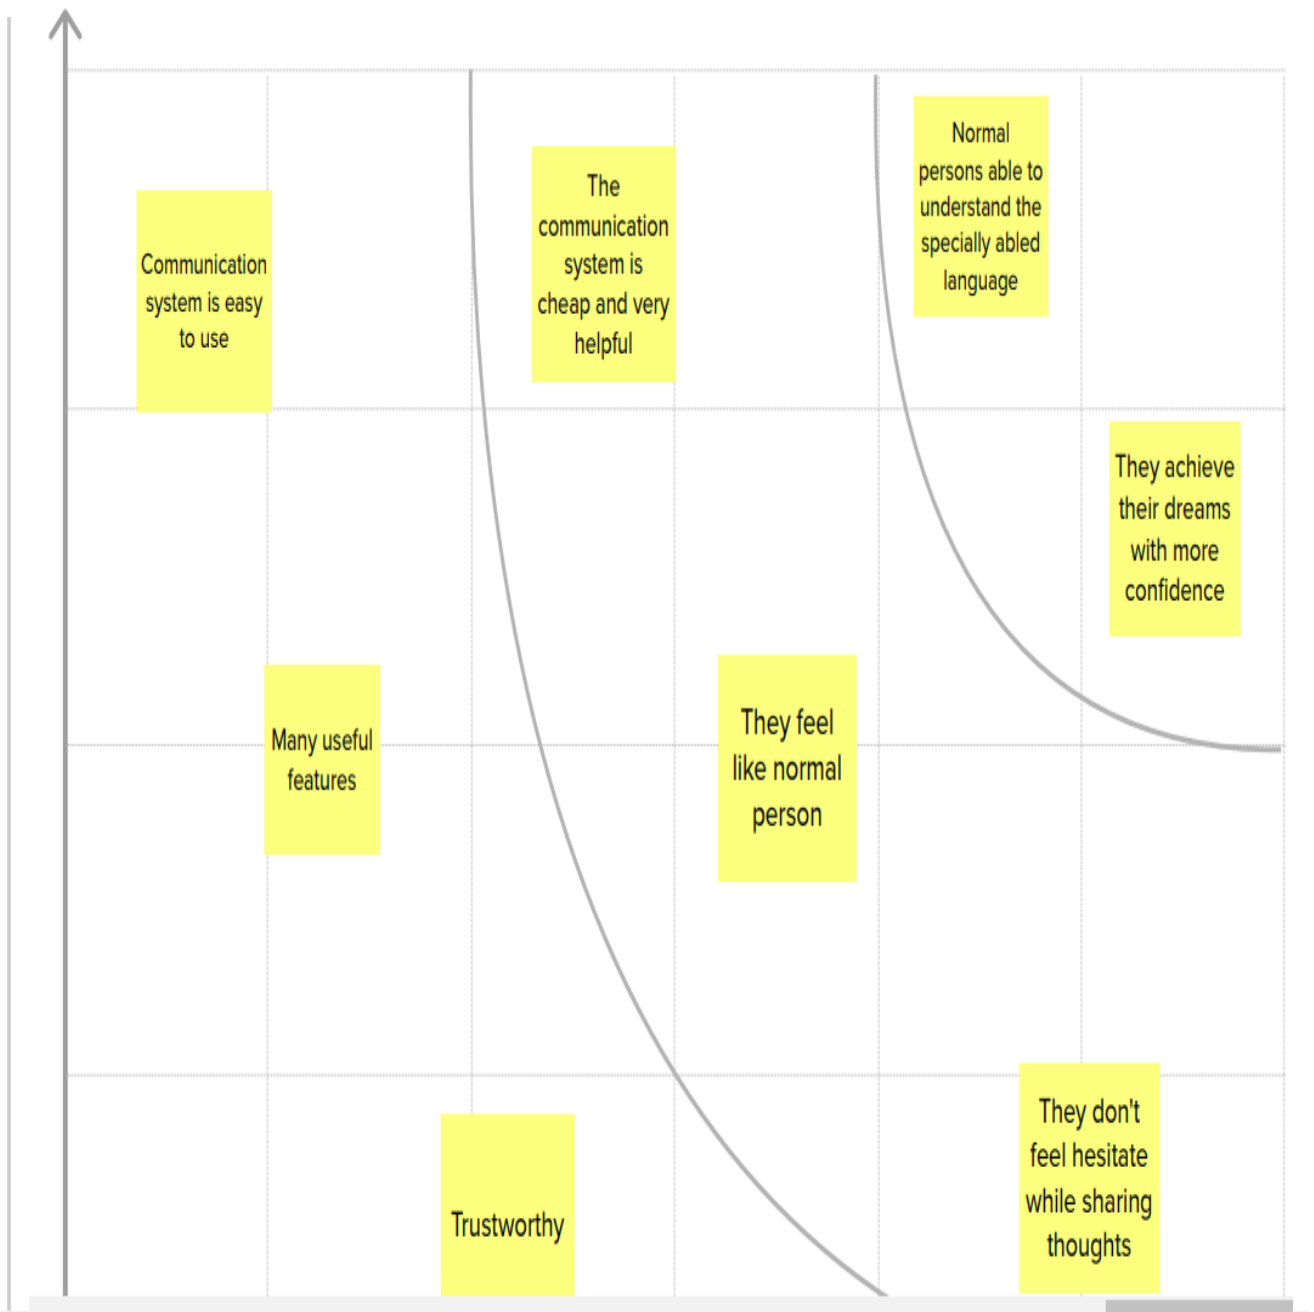

Build empathy

The information you add here should be representative of the observations and research you've done about your users.

3.2 Ideation & Brainstorming

3.3 Proposed Solution

S. No:	Parameter	Description
1.	Problem Statement (Problem to be solved)	The sixth sense is a multi-platform app for aiding the people in need that is people who are handicapped in the form of lack of speech (dumb), lack of hearing (deaf), lack of sight (blind), lack of judicial power to differentiate between objects (visual agnosia) and people suffering from autism (characterized by great difficulty in communicating and forming relationships with other people and in using language and abstract concepts). Our current implementation of the product is on two platforms, namely, mobile and a web app.
2.	Idea / Solution description	The current implementation deals with object recognition and text to speech and a speech to text converter. The speech to text converter and text to speech converter utilized the Web Speech API (Application Program Interface) for the website and text to speech and speech to text library for the mobile platform. The object recognition wouldn't fetch enough use out of a website.

		<p>Hence, it has been implemented on the mobile app utilizing the Firebase ML toolkit and different pre-trained models, which are both available offline as well as online.</p>
3.	Novelty / Uniqueness	<p>The world does not want just machine to do what they are told but even expect devices to work like us. Machine learning, a subsection of AI, is the hottest technology right now being implemented daily basis and is to be supposed to reach its peak in the next decade. Now, as the world has become a better place by providing everything at ease through technology to humans, we need to utilize the technology for differently-abled people.</p>
4.	Social Impact / Customer Satisfaction	<p>Thus, customer satisfaction has benefits as it helps minimize extra costs, enables industry know their repeat customer better, which could help in improving future service. Higher accuracy could be achieved in the future scope of the implementation through the use of custom models for object detection and text recognition as it could take into account the cases of</p>

		objects for differently-abled people and work on those only yielding faster and accurate results.
5.	Business Model (Revenue Model)	<p>The major contribution of the work is:</p> <ul style="list-style-type: none"> • Integration of multiple modules to provide a single application to aid people of different disabilities. • All the modules are researched solely rather than have a single source for all. This is the aim of work being performed in this work. • An innovative approach for text to speech is implemented to provide a faster and convenient approach for mute to communicate through SAM (Speech Assisted for Mute).
6.	Scalability of the Solution	The text to speech and Speech to Text Engine was based on the Google Speech Engine. IT has a similar implementation, as discussed in the website counterpart. All these sections have been then integrated into a single application to provide a single solution for all.

3.4 Problem Solution fit

Problem-Solution fit canvas 2.0

Purpose / Vision

1. CUSTOMER SEGMENT(S)

Who is your customer?
i.e. working parents of 0-5 y.o. kids

CS

6. CUSTOMER CONSTRAINTS

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available d

S, fit into CC

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Authentication	Authentication through Facial recognition Authentication through Password authentication protocol
FR-4	External interfaces	Robots and other tools provide home-based care and other assistance, allowing people with disabilities to live independently
FR-5	Transaction Processing	More application can use to translate the sign language like D talk in the system
FR-6	Reporting	There is a growing feeling that we need to do more, to help make the lives of people with disabilities easier
FR-7	Business rules	Human augmentation and Practical accuracy are responsible for AI business rules.

4.2 NON FUNCTIONAL REQUIREMENTS:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Provides personalised learning experiences tailored to the specific needs of students with disabilities.

NFR-2	Security	Set the inclusion and exclusion criteria , Report the results in the survey.
NFR-3	Reliability	It setting the pace of the future and helping people in need.
NFR-4	Performance	Enables people with disabilities to step into a world where their difficulties are understood and taken into account.
NFR-5	Availability	Technology solutions that mimic humans and use logic from playing chess to solving equations and Machine learning is one of the technologies.
NFR-6	Scalability	The improvement in the specially abled persons interaction with the environments.

6. PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Milestone Activity Plan.

Use the below template to create product backlog and sprint schedule

Milestone	Function (Epic)	Milestone Story Number	Story / Task
Milestone -1	Data Collection	M1	we're collecting dataset for building our project and creating two folders, one for training and another one for testing.
Milestone-2	Image preprocessing	M2	Importing image data generator libraries and applying image data generator functionality to train the test set.
Milestone-3	Model Building	M3	Importing the model building libraries, Initializing the model, Adding Convolution layers, Adding the Pooling layers, Adding the Flatten layers, Adding Dense layers, Compiling the model Fit and Save the model.
Milestone-4	Testing the model	M4	Import the packages first. Then we save the model and Load the test image, preprocess it and predict it.
Milestone-5	Application layer	M5	Build the flask application and the HTML pages.
Milestone-6	Train CNN model	M6	Register for IBM Cloud and train Image Classification Model.
Milestone-6	Final result	M7	To ensure all the activities and resulting the final output.

:

6.2 Sprint Delivery Schedule :

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Data Collection	USN-1	CollectDataset.	9	High	CHEZHAN P GOKUL P
Sprint-1		USN-2	Image preprocessing	8	Medium	CHARLES J PUGAZHANDHI S
Sprint-2	Model Building	USN-3	Import the required libraries, add the necessary layers and compile the model	10	High	CHEZHAN P PUGAZHANDHI S
Sprint-2		USN-4	Training the image classification model using CNN	7	Medium	GOKUL P CHARLES J
Sprint-3	Training and Testing	USN-5	Training the model and testing the model's performance	9	High	CHEZHAN P GOKUL P
Sprint-4	Implementation of the application	USN-6	Converting the input sign language images into English alphabets	8	Medium	CHARLES J PUGAZHANDHI S
Sprint-4	Test the model	USN-8	Model testing	8	Medium	Madhumitha

7. CODING & SOLUTIONING (Explain the features added in the project along with code)

Out[32]:

8.2 User Acceptance Testing

1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the [ProductName] project at the time of the release to User Acceptance Testing (UAT).

2. Defect Analysis

This report shows the number of resolved or closed bugs at each severity level, and how they were resolved

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	11	2	3	2	18
Duplicate	1	3	4	0	8
External	3	5	0	0	8
Fixed	12	2	5	22	41
Not Reproduced	0	1	0	0	1
Skipped	0	0	1	2	3
Won't Fix	0	4	1	1	7
Totals	27	17	14	27	86

3. Test Case Analysis

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	8	0	0	8
Client Application	49	0	0	49
Security	4	0	0	4

Outsource Shipping	4	0	0	4
Exception Reporting	11	0	0	11
Final Report Output	2	0	0	2
Version Control	1	0	0	1

9. RESULTS

9.1 Performance Metrics

Technical Skills Evaluation Matrix							
S. No.	Metric	Weightage (%)	Description	Sub-Evaluation Metric & Scoring Criteria	Score	Description	Standard Template
1	Technical Training & Assignments	25%	This metric will be assessed based on the following: 1. Participation in the Task & the end of each session session 2. Completion of assigned assignments	Number of Tasks / Assignments Completed (Total = 10 Marks)	10	Score will be 10/10 (100%) (10 points)	Yes
				Assignment 1 Assignment 2 Assignment 3 Assignment 4	2 2 2 2	Weekly Assignment Weekly Assignment Weekly Assignment Weekly Assignment	Yes
2	Innovation & Problem Solving	10%	This metric will be assessed and scored based on the criteria: 1. Innovation & Problem Solving 2. Innovation & Problem Solving 3. Innovation & Problem Solving	1. Diagnostic & Discovery	10	A solution identified after analysis on the 3rd or 4th day, when, where, why, of the problem, based on template provided	Yes
				2. Define the Problem Statement	10	Clear mapping to solution is a problem. It is important to understand why you are doing it, for, so you can have clear scope, objectives, limitations, and resources to solve the problem	Yes
				3. Solution & Problem Statement	10	Based on the problem statement, a clear and well-defined solution is proposed, which is supported by a clear and well-defined solution. The solution is supported by a clear and well-defined solution. The solution is supported by a clear and well-defined solution.	Yes
3	Requirement Analysis using Critical Thinking	10%	This metric will be assessed based on the following: 1. Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	Yes
				Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	Yes
				Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Requirement Analysis (Functional, Operational, Technical) (Flow Chart)	Yes
4	Project Design using Design Thinking	10%	This metric will be assessed and scored based on the following: 1. Project Design (Functional, Operational, Technical) (Flow Chart) 2. Project Design (Functional, Operational, Technical) (Flow Chart) 3. Project Design (Functional, Operational, Technical) (Flow Chart)	Project Design (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Design (Functional, Operational, Technical) (Flow Chart)	Yes
				Project Design (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Design (Functional, Operational, Technical) (Flow Chart)	Yes
				Project Design (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Design (Functional, Operational, Technical) (Flow Chart)	Yes
5	Technology Stack	10%	This metric will be assessed and scored based on the following: 1. Technology Stack (Functional, Operational, Technical) (Flow Chart) 2. Technology Stack (Functional, Operational, Technical) (Flow Chart) 3. Technology Stack (Functional, Operational, Technical) (Flow Chart)	Technology Stack (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Technology Stack (Functional, Operational, Technical) (Flow Chart)	Yes
				Technology Stack (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Technology Stack (Functional, Operational, Technical) (Flow Chart)	Yes
				Technology Stack (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Technology Stack (Functional, Operational, Technical) (Flow Chart)	Yes
6	Project Planning using Agile Methodologies	10%	This metric will be assessed and scored based on the following: 1. Project Planning (Functional, Operational, Technical) (Flow Chart) 2. Project Planning (Functional, Operational, Technical) (Flow Chart) 3. Project Planning (Functional, Operational, Technical) (Flow Chart)	Project Planning (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Planning (Functional, Operational, Technical) (Flow Chart)	Yes
				Project Planning (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Planning (Functional, Operational, Technical) (Flow Chart)	Yes
				Project Planning (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Project Planning (Functional, Operational, Technical) (Flow Chart)	Yes
7	Coding & Subsetting	10%	This metric will be assessed and scored based on the following: 1. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart) 2. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart) 3. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	Yes
				Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	Yes
				Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Coding & Subsetting (Functional, Operational, Technical) (Flow Chart)	Yes
8	Acceptance Testing	10%	This metric will be assessed and scored based on the following: 1. Acceptance Testing (Functional, Operational, Technical) (Flow Chart) 2. Acceptance Testing (Functional, Operational, Technical) (Flow Chart) 3. Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	Yes
				Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	Yes
				Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Acceptance Testing (Functional, Operational, Technical) (Flow Chart)	Yes
9	Performance Testing	10%	This metric will be assessed and scored based on the following: 1. Performance Testing (Functional, Operational, Technical) (Flow Chart) 2. Performance Testing (Functional, Operational, Technical) (Flow Chart) 3. Performance Testing (Functional, Operational, Technical) (Flow Chart)	Performance Testing (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. 				Performance Testing (Functional, Operational, Technical) (Flow Chart)	10	Understand the problem, based on the criteria: 1. Performance Testing (Functional, Operational, Technical) (Flow Chart)	Yes

10.ADVANTAGES & DISADVANTAGES

Advantages:

- It is a cost-effective way of getting several people from different locations to attend meetings and conferences.
- It enables employees from across the world to communicate with each other 24×7 and share ideas or solve problems quickly.

Disadvantages:

- Also accuracy depends upon distance between camera and object.
- It takes a lot of time to listen, speak, read, or write to someone.

11. CONCLUSION

The proposed communication system between Deaf and Dumb people and ordinary people are aiming for it when bridging the communication gap between two societies. It provides complete two sided communication in an efficient manner between the disabled and the normal person.

For communication between deaf person and a second person, a mediator is required to translate sign language of deaf person. But a mediator is required to know the sign language used by deaf person. But this is not always possible since there are multiple sign languages for multiple languages.

So to understand all sign languages, Hand gestures of deaf peoples by normal peoples this system is proposed.

12. FUTURE SCOPE

The speech-to-text and text-to-speech technologies helped those people who had difficulties in communicating or expressing their feelings to the normal people.

This reduces the communication gap between the normal people and the specially abled people.

Using image pre-processing and Artificial Intelligence it is easy to understand the context of objects and clearly explains it to the people who use it for communication.
