

## **Build empathy**

The information you add here should be representative of the observations and research you've done about your users.

## Says

What have we heard them say? What can we imagine them saying?

Make them feel confident

Is this is trustable?

I was expecting something different

Keep them motivated

> Is this is really work out in a beneficiary manner?

How can they use this?

Commnication System for Specially Abled Peoples

make the society improved with modern tecnology

they try to built this to help the specially abled persons to communicate as well as normal person to understand the sign language

Does

they develop many useful features for the specially abled persons

> They try to prove that specially abled are not different from others

they design an device to help the specially abled persons

## Thinks

What are their wants, needs, hopes, and dreams? They want a What other thoughts might very useful influence their behavior?

> They want to be a normal person without any diasablities with the help of this system

thing to

convey a

message

How can they communicate with the system in an emergency situation?

It might be good if others understand their language by a useful translation system

It is a big dream of them to communicate like a normal person

They are influenced by others like there disablities can't be solved till life long

the translation system really works well?

What if they

can't able to

use this?

In this modern world there are many applications, apps and devices to satisfy their needs, but there is no proper applications to help them from this disabilites

Is it easily access by a normal specially abled persons?

## Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?

friendly app or a

What behavior have we observed? What can we imagine them doing?
